

## ROOF TYPES

## MESH MATCHER™

Every environment and roof is different. Use our Mesh Matcher™ tool to find the right gutter mesh for you. Mesh Matcher™ asks six simple questions about your location, preferences and needs, then uses your answers to recommend the right mesh (or meshes) for you. Visit [meshmatcher.com.au](http://meshmatcher.com.au)

## GET A QUOTE TOOL

Save time and effort and make ordering easy with the Blue Mountain Co Gutter Mesh Quote Tool. Input the steel or aluminium mesh you require, specify your colours and components and take away a one page PDF with everything you need. Visit [bluemountainmesh.com.au](http://bluemountainmesh.com.au)

## COMPLIANCE

- Conforms to the Australian Standard for the Construction of buildings in bushfire prone areas (AS 3959-2009)
- Non-combustible material as per AS3959-2009 (CSIRO assessed)
- Conforms to the Building Code of Australia (BCA 2009)

GUTTER MESH

# 2mm Steel Gutter Mesh

Keeps out small leaves

Keeps out most needles

Keeps out medium leaves

Keeps out large leaves

Bushfire compliant

Ember guard compliant†

Keeps out pests & vermin

Withstands hail & snow

High strength

30 Colours

## Specification Guide

## PRODUCT DESCRIPTION

Blue Mountain Mesh 2mm Super fine steel gutter guard has been specifically designed to meet the Australian Standard for the ember guard protection of sheet roofs for all Bushfire Attack Levels (BAL-12.5 clause 5.6.3; BAL-19 clause 6.6.3; BAL-29 clause 7.6.3; BAL-40 clause 8.6.3; BAL-FZ clause 9.6.3-2011). The 2mm aperture is the prescribed opening to restrict burning debris (embers) from entering gaps and igniting buildings, and the product has also undergone rigorous, independent testing by the CSIRO to certify that the materials used meet the definition of non-combustible prescribed in the Building Code of Australia.

The 2mm mesh is also perfectly designed to prevent leaves and debris from entering gutters and downpipes. Particularly suited to situations where a building has fine leaf trees, like jacarandas nearby; the fine aperture of Blue Mountain Mesh 2mm Super fine gutter guard, assists in minimising the entry of small or fine leaves into a buildings gutters.

The all steel, non-combustible mesh gutter guard minimises gutter maintenance and improves the quality of rain water collected for tanks and can also be used as an effective gutter guard on buildings in bush re prone areas as it meets the Standard to act as an ember guard for gutters. The proprietary hot dipped zinc coated and oven baked manufacturing process offers superior corrosion and heat resistance, providing superior protection for homes over the longer term.

## HOW IT WORKS

The Blue Mountain Mesh 2mm ember guard forms a protective barrier for any gaps around a building greater than 3mm, as they need to be sealed by a mesh or perforated sheet with a maximum aperture of 2mm so that embers have less chance of settling on or inside a building and subsequently setting it on fire.

The Blue Mountain Mesh over-the-gutter, ski-slope design, system forms a physical barrier to prevent embers, leaves and debris from entering gutters. The mesh fits from the outside edge of the gutter across the gutter section and then is attached to the roof surface.

This creates a platform that suspends leaves and debris above the roof gutter, allowing the majority of material build-up to be blown away by wind action. Blue Mountain Mesh over-the-gutter gutter protection systems offer year round low-maintenance protection that keeps gutters from getting blocked, preventing flooding of eaves, ceiling and wall cavities; and extra protection from hail and flooding rains during storms.

## FEATURES AND BENEFITS

- 2mm steel gutter mesh is compliant for use as an ember guard and gutter guard in all bushfire-prone areas
- Meets the Australian Standard for ember guard protection of sheet roofs (AS3959-2009/Amdt 2011).
- Helps prevent embers getting into your roof cavity through gaps between your gutters and roof
- Finest mesh in our range, ideal for small leaf trees (e.g. wattle, jacaranda, Poinciana)

- Strong enough to keep possums, birds and other pests out of your gutters and roof
- 2mm Steel mesh can bear heavy loads and withstand puncturing from hail and falling debris
- Install with patented componentry and a choice of 30+ COLORBOND® colours
- The mesh comes in a kit with colour-matched trims, screws and profiles, clips or saddles for installation

## COLOURS

Designed to blend with the colour scheme of your home. It is custom made and designed to match the COLORBOND® steel colour range. However, it is also available in practically any colour you desire on request.

*Printed colours are representations only and may differ from actual colours.*

## COMPONENTRY - IT'S ALL IN THE KIT

## MAINTENANCE

No gutter guard system is completely maintenance free. From time to time, you will need to check your gutter guard for any debris caught on the edge of the mesh or saddles, including the valley mesh. If there is any build-up of sediment or fine debris inside the gutter, use a normal pressure hose to flush the debris through the mesh out of the gutters and down the downpipe. You should not remove the mesh whilst carrying out maintenance.

<sup>1</sup> Compliant for use on new homes in bushfire-prone areas with a bushfire attack level (BAL) of 12.5 or higher, as per AS3959-2009 Australian Standard: Construction of buildings in bushfire-prone areas.
